

FedEx Shipping Plugin for WooCommerce Support Guide

FedEx Release - v8.3.2 | Generated June 16, 2026

Release Lane	FedEx Release - v8.3.2
Plugin Version	v8.3.2
Primary Audience	Customer support, QA, and implementation teams

Release Summary

- This release focuses on label accuracy, time-sensitive pickup handling, and clearer separation between FedEx registration details and general plugin settings.

Included Release Items

- Void Shipment + Swapped label address
- Fix Express pickup date to advance when ready time has passed
- Separate registration details from settings options

What Changed

- Shipment voiding and label-address handling were updated so support can better trust the shipment state and printed address details after corrections or cancellations.
- Express pickup-date selection now advances when the configured ready time has already passed, helping avoid same-day pickup requests that are no longer valid.
- Registration details were separated from broader settings so merchants can more clearly manage onboarding data without confusing it with day-to-day shipping options.

Customer Impact

- Merchants should see fewer cases where label details appear inconsistent after shipment voiding or rework.
- Pickup scheduling should behave more predictably when labels are created later in the day.
- Carrier setup screens should feel clearer, especially for merchants revisiting credentials or registration-related values.

Support Talking Points

- If a merchant reports swapped or unexpected label address details, confirm whether the issue happened before or after a void/retry workflow.
- If a same-day Express pickup is not offered after the ready time has passed, explain that the plugin now shifts to the next valid pickup date instead of sending an outdated request.
- If a merchant cannot find a registration field, guide them to the registration-specific section rather than the general shipping settings area.

How Support Can Verify The Release

- Create and void a test shipment, then verify the follow-up label reflects the correct shipment address details.

- Set an Express-ready time earlier than the current time and confirm the pickup date advances to the next valid option.
- Open settings and confirm registration-related values are shown separately from standard shipping preferences.

Expected Scenarios

- A merchant voids a shipment and recreates the label after correcting an address.
- A merchant creates an Express shipment after the daily ready-time cutoff.
- A merchant revisits FedEx setup and needs to update registration details without changing regular shipping behavior.

Escalation Guidance

- Escalate if label addresses are still swapped after reproducing the issue with a fresh shipment.
- Escalate if the pickup date does not advance and FedEx rejects the request due to time cutoff issues.
- Escalate UI placement issues if required registration fields are missing or inaccessible.
