

India Post Test Scenarios

Initial implementation of India Post | Generated June 19, 2026

Source Card	Initial implementation of India Post
Board	ph-Woo-WIP-Releases
Audience	QA and support teams
Card URL	https://trello.com/c/1NZIOM8N

Scope Summary

- Initial implementation of the India Post WooCommerce shipping plugin. The scope covers India Post API connectivity for Speed Post and Business Parcel, real-time rate retrieval, PDF address label generation, and return-shipment support.

Test Areas

- Plugin Setup
- Rate Calculation
- Label Generation
- Return Labels
- Insurance
- Admin UI

Prerequisites

- Use a WooCommerce test store with the India Post plugin installed and activated.
- Use valid sandbox or test credentials from the internal onboarding/reference material linked on the card.
- Configure at least one shippable product with valid weight and address-ready checkout data.
- Keep a test barcode range available for label-generation scenarios.
- Prepare one domestic and one return-shipment test order before execution.

Scenario Details

TS01 | Plugin Setup | Positive

GIVEN

valid India Post API credentials and a valid barcode range are entered in plugin settings.

WHEN

the merchant saves the India Post configuration.

THEN

the settings should save successfully and remain available after refresh.

TS02 | Plugin Setup | Negative

GIVEN

one or more mandatory India Post credentials are missing.

WHEN

the merchant attempts to save the plugin settings.

THEN

the save should be blocked or a clear validation error should be shown.

TS03 | Rate Calculation | Positive

GIVEN

a checkout order is eligible for Speed Post and the plugin is configured correctly.

WHEN

rates are requested at checkout.

THEN

the Speed Post service should be returned and shown correctly.

TS04 | Rate Calculation | Positive

GIVEN

a checkout order is eligible for Business Parcel and the plugin is configured correctly.

WHEN

rates are requested at checkout.

THEN

the Business Parcel service should be returned and shown correctly.

TS05 | Rate Calculation | Negative

GIVEN

the destination or shipment data is invalid or incomplete.

WHEN

the plugin requests India Post rates.

THEN

rates should not be returned and the merchant should see an understandable failure message.

TS06 | Rate Calculation | Positive

GIVEN

the customer selects an India Post service at checkout.

WHEN

the WooCommerce order is opened in admin.

THEN

the selected India Post service should be preserved and visible on the order.

TS07 | Label Generation | Positive

GIVEN

a valid Speed Post order is ready for processing.

WHEN

the merchant generates a label from the order admin screen.

THEN

a readable PDF address label should be created successfully.

TS08 | Label Generation | Positive

GIVEN

a valid Business Parcel order is ready for processing.

WHEN

the merchant generates a label from the order admin screen.

THEN

a readable PDF address label should be created successfully.

TS09 | Label Generation | Positive**GIVEN**

a valid barcode range is configured.

WHEN

a new India Post label is generated.

THEN

the next valid barcode from the configured range should be consumed for that label.

TS10 | Label Generation | Negative**GIVEN**

the configured barcode range is exhausted or invalid.

WHEN

the merchant tries to generate an India Post label.

THEN

label generation should fail gracefully without partial processing.

TS11 | Return Labels | Positive**GIVEN**

a supported order is eligible for return shipment creation.

WHEN

the merchant generates a return label.

THEN

the plugin should create a valid India Post return label successfully.

TS12 | Return Labels | Negative**GIVEN**

required return-shipment data is missing.

WHEN

the merchant tries to create a return label.

THEN

the plugin should stop the flow and show a clear error.

TS13 | Insurance | Positive**GIVEN**

insurance is enabled for a supported India Post shipment.

WHEN

the shipment is rated or processed.

THEN

the insurance setting should be applied correctly in the shipping workflow.

TS14 | Insurance | Negative

GIVEN

insurance input is unsupported or incomplete.

WHEN

the merchant proceeds with rate or label generation.

THEN

the workflow should not break and the merchant should receive a clear outcome.

TS15 | Admin UI | Positive

GIVEN

an order uses India Post.

WHEN

the merchant opens the order admin screen.

THEN

the carrier, selected service, and label-related actions should be shown clearly.

TS16 | Admin UI | Negative

GIVEN

an India Post rate or label request fails.

WHEN

the admin UI reflects the result.

THEN

the error messaging should remain actionable and understandable.

TS17 | Admin UI | Regression

GIVEN

the recipient address is edited before label generation.

WHEN

the merchant reruns the India Post workflow.

THEN

the updated address should be used correctly in the next request.

TS18 | Label Generation | Regression

GIVEN

a label has already been generated successfully for an order.

WHEN

the merchant repeats the label-generation action.

THEN

the plugin should avoid creating unintended duplicate labels.

Execution Notes

- Do not include raw sandbox passwords in external QA evidence; use internal references only.
- Capture API evidence for rating, label, and return failures.
- Verify that generated PDF labels are downloadable and readable, not just API-successful.
- Repeat label-generation and edit-order flows to catch duplicate-processing regressions.
