Shipment Tracking Release - v3.2.1

Prepared for support enablement

Release Lane	Shipment Tracking Release - v3.2.1
Plugin Version	3.2.1
Primary Audience	Support, QA, and customer-facing operations teams

Release Summary

This release fixes the carrier Add/Edit popup behavior in Chrome for Shipment Tracking Pro. The primary support impact is around admin usability: merchants using Chrome should be able to add or edit carriers without popup-related display or interaction problems.

What Changed

- **Carrier Add/Edit Popup Chrome fix:** The carrier Add/Edit popup is adjusted specifically for Chrome so it displays and behaves correctly during carrier configuration. This should reduce admin-side setup friction and prevent Chrome-only configuration failures.

Customer Impact

- Merchants using Chrome should have a smoother experience when adding or editing carriers.
- Support teams should see fewer browser-specific complaints tied to the carrier popup workflow.
- Carrier configuration tasks that previously required switching browsers may now work correctly in Chrome.
- Non-Chrome browsers should generally see no functional change beyond maintained compatibility.

Support Talking Points

- If a merchant reports issues adding or editing carriers in Chrome, first confirm they are on v3.2.1.
- If the merchant says the popup does not open correctly, is misaligned, or cannot be used, this release is intended to address that exact Chrome-specific behavior.
- If the issue only happens in Chrome and not in another browser, it is a strong fit for this release item.
- If the issue happens in all browsers, treat it as a broader carrier-configuration problem rather than assuming it is covered by this fix.

How Support Can Verify The Release

- Chrome add-carrier scenario: open the carrier management area in Chrome, launch the Add Carrier popup, and confirm it opens and is usable.
- Chrome edit-carrier scenario: edit an existing carrier in Chrome and confirm the popup renders correctly and saves changes successfully.
- Interaction scenario: verify popup controls such as input fields, dropdowns, and save/cancel actions are clickable and responsive in Chrome.
- Cross-browser sanity scenario: confirm the same flow still works in at least one non-Chrome browser so compatibility is preserved.

Expected Scenarios

- **Merchant says popup is broken only in Chrome:** Confirm the plugin is updated to v3.2.1 and retest the Add/Edit carrier flow in Chrome first.
- **Merchant had to switch browsers before:** Ask them to retry the workflow in Chrome after updating, since this release specifically targets that browser behavior.

- **Popup still opens but fields are unusable:** Capture whether the issue is with rendering, focus, clicks, or saving so it can be separated from general JavaScript or theme conflicts.
- **Issue occurs in every browser:** Treat it as a broader admin or plugin conflict rather than a Chrome-only popup regression.

Escalation Guidance

- Escalate if the Add/Edit carrier popup still fails reproducibly in Chrome on v3.2.1.
- Escalate if the popup opens but fields, dropdowns, or save actions remain unusable in Chrome.
- Escalate if there is evidence of a broader JavaScript conflict affecting the popup across multiple browsers.
- Include Chrome version, plugin version, screenshots or screen recording of the popup issue, affected carrier action, and whether the problem reproduces in other browsers.
