

Shipment Tracking Plugin for WooCommerce Support Guide

Shipment Tracking Release 3.3.0 | Generated June 16, 2026

Release Lane	Shipment Tracking Release 3.3.0
Plugin Version	3.3.0
Primary Audience	Customer support, QA, and implementation teams

Release Summary

- This release adds Canpar courier shipment-tracking integration to the Shipment Tracking plugin.

Included Release Items

- Canpar courier - shipment tracking integration

What Changed

- Canpar courier support was added to the shipment-tracking integration set.

Customer Impact

- Merchants using Canpar can now manage tracking through the Shipment Tracking plugin instead of relying on custom workarounds.
- Customers should receive a more consistent tracking experience when Canpar is the active carrier.

Support Talking Points

- If a merchant asks whether Canpar is supported, confirm that native shipment-tracking integration is included in version 3.3.0.
- If tracking is not updating, first confirm the merchant selected Canpar in the tracking workflow and is using the updated plugin version.

How Support Can Verify The Release

- Add a shipment with Canpar as the carrier and verify tracking details can be saved and displayed correctly.
- Confirm the customer-facing tracking flow behaves as expected for a Canpar order.

Expected Scenarios

- A merchant wants to enable Canpar without using a custom carrier workaround.
- Support needs to validate whether Canpar tracking details are being stored and shown properly.

Escalation Guidance

- Escalate if Canpar cannot be selected, saved, or rendered correctly after confirming version 3.3.0 is active.
- Escalate if customer-facing tracking links or status details fail specifically for Canpar while other carriers work.
